Training Course on Surface Treatment and Coating for Steel

1-2 July 2026
MISIF Training Room,
Shah Alam, Selangor

The course is designed to be general enough for non-engineering personnel but provide sufficient information about surface treatment and coating done steel component, especially the ones used for corrosion protection and wear resistance. The main focus is on some of the most used techniques; surface hardening, chemical surface treatment, electroplating, electroless plating, hot dip galvanizing and anodization for metal components.

Who Should Attend:

- This course is designed for engineers, maintenance engineers, managers, supervisors who wish to broaden their knowledge related to surface treatment and coating done on steel components, especially for purpose of corrosion protection and wear improvement.
- The topics include an introduction on structure-properties-process relationship to give participants on the fundamental of materials (metals especially steel). A brief review on hardness and wear, and corrosion of metal is included to provide solid understanding on why surface treatment and coating are important, and how the treatment is able to provide better protection against wear and corrosion.
